An Evolution-Driven Computational Screening for RNA Motifs

Daniel Dachs

BIOC490

Supervisor: Paul Gardner

Department of Biochemistry

University of Otago

1 Introduction

Backofen et al. (2014) has shown that this phenomenon is well documented.

This introduction provides the background and rationale for [brief description of your project area]. [Additional context about the broader field or problem]. The proposed project aims to [state in 1-2 sentences what you are going to do].

According to Backofen et al. (2014), this phenomenon has been well documented. Studies have shown multiple trends (Backofen et al., 2014).

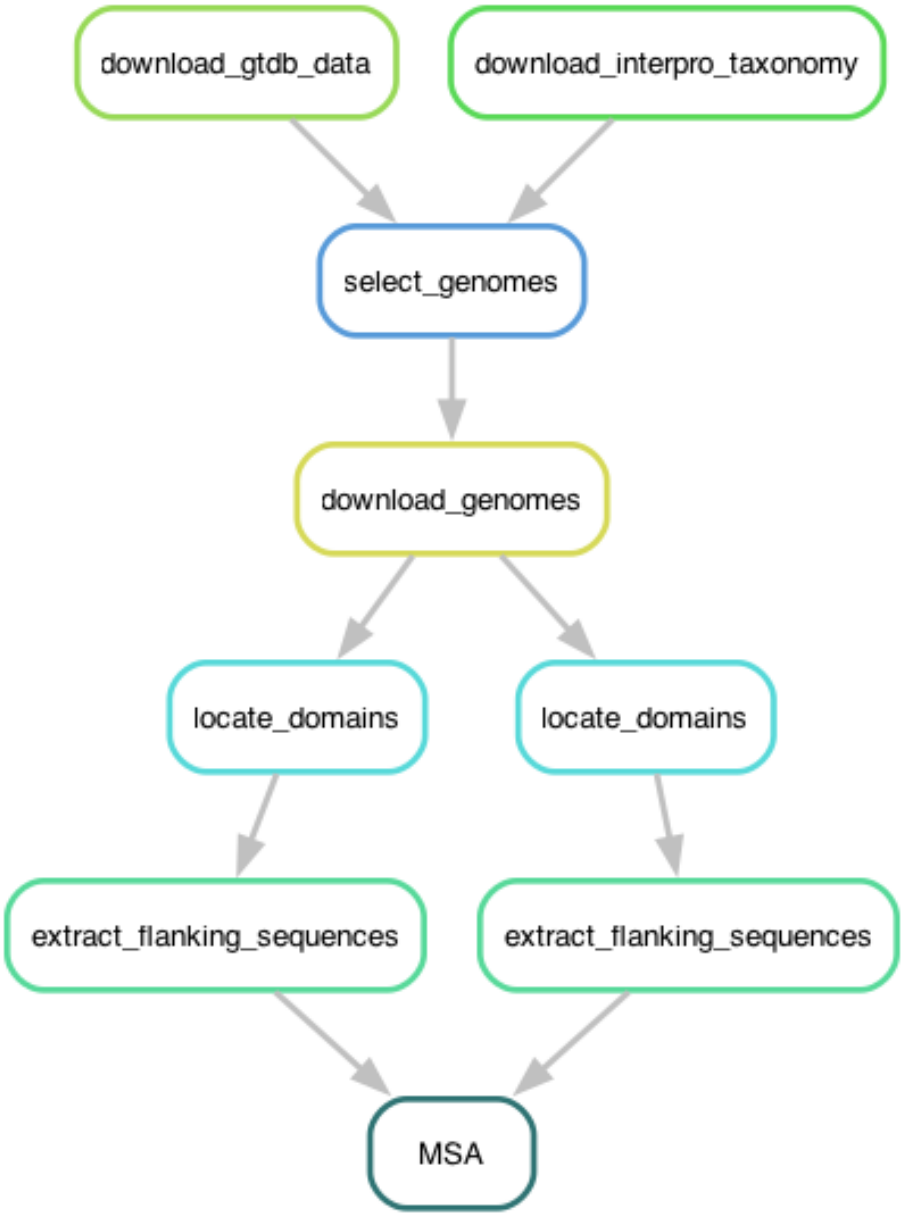

Figure 1: Title of figure. A Description of what the figure shows, including any important details needed to understand it.

Figure 1 is the proposed pipeline for the systematic computational screening.

1.1 Ribozymes and RNP Complexes

[Content here] Include background of main discoveries i.e. families of ribozymes

1.2 Current Methods for Ribozyme Discovery

[Content here]

1.3 Evolution based Screens Yield Positive Results

[Content here]

1.4 Bioinformatic Approach

[Content here]

2 Aims

The main aims of this project are:

1. **Aim 1:** [Description of first aim - what you want to achieve, not how]
2. **Aim 2:** [Description of second aim]
3. **Aim 3:** [Description of third aim if applicable]

[Brief paragraph explaining how these aims relate to each other and the overall project goal]
